Description

This is a completely portable self-contained A/C unit with compressor and 134A refrigerant.

Weight: 42 lbs.

Dimensions: 13"W x 19"H x 13"D

Power Source: works in a 12 volt aircraft

200 cfm (cubic ft/minute) (turns over air in 4 seat aircraft every 60 seconds.

Arctic Air can control the amps you draw at a low of 19 amps and a high of 27 amps. Start-up peaks at 40 amps for a split second and levels off at 25 amps.

If plane will give us 27 amps of power at 12 volts, the unit will put out 7,000 BTUs of a/c.

If plane will give us 19 amps of power, the unit will put out 5,000 BTUs of A/C

Condensation is routed from inside the unit thru a condensation disposal hose and collected in a reservoir of your choice placed on the outside of the unit. The accumulated condensation can then be disposed of when the aircraft is parked. Also, the condensation disposal hose can be routed through a drain hole in the bottom of the aircraft allowing the condensation to be removed continuously during flight.

Exhaust air is vented out rear of the aircraft using a flexible hose attached to the rear of the unit and routed through the rear cargo wall..

1 year warranty - parts and labor, 30 day money back guarantee.
